

Beautiful Dragons Digital Indoor/Outdoor Thermometer by Oregon Scientific

This is an Oregon Scientific Indoor/Outdoor Digital Thermometer with an attached probe.

Here are some of the features:

- * Three line LCD display that shows the clock, indoor & outdoor (probe) temperature.
- * Alarm capability with snooze function.
- * 12 or 24 hour format.
- * Temperature can be displayed in C or F.
- * Minimum and maximum temperature memory.
- * External sensor (water proof) probe with 10 foot long cable.
- * Desktop stand and wall mounting capability.
- * LED backlight for visibility in the dark.
- * Minimum temperature of 23 degrees F.
- * Maximum temperature of 158 degrees F.
- * Measuring accuracy of +/-2 degrees F.
- * Sensor reads temps every 10 seconds!
- * Dimensions of the unit are 4.1" (long) x 2.5" (wide) x .8" (thick)
- * Uses 2 AAA batteries.

The minimum and maximum memory feature is really nice. You can reset in the morning and if you check on it later in the day, you'll be able to see how hot it got at the probe (basking spot) or at the unit, or how cool it got at night, etc. Also the LED back light is very useful for reading temps in the dark. The thermometer comes new in the package (without batteries). I use these in all my cages and they are great! Also, I use these in my aquariums. The probe is completely waterproof and very accurate.
